

AMENDMENTS TO THE CLAIMS

Cancel Claims 6, 8, 9, and 18-24 without prejudice. Please accept amended Claim 1 and New Claim 25 as follows:

1. (Currently Amended) A liquid crystal display having a first substrate and a second substrate which are disposed with a predetermined gap therebetween, in which liquid crystal is sealed in said gap, comprising:

post structures for controlling the gap between said first substrate and said second substrate;

a sealing material provided outside a display area for sealing said liquid crystal in said gap, and forming an open injection hole for injecting said liquid crystal therethrough;

an end-sealing material for sealing said injection hole after said liquid crystal is sealed in; and

injection hole post structures provided ~~in an area near~~ between projection portions of said sealing material forming said injection hole formed of the same material as said post structures, wherein said injection hole post structures are arranged in a plurality of rows and a plurality of columns.

2. (Previously Presented) The liquid crystal display according to Claim 1, wherein said injection hole post structures divide the width of said injection hole into 0.1 millimeter to 3 millimeters.

3. (Original) The liquid crystal display according to Claim 1, wherein said injection hole post structures are formed with a height lower than the height of the gap formed by said first substrate and said second substrate.

4. (Cancelled)

5. (Previously Presented) The liquid crystal display according to Claim 1, wherein said injection hole post structures are formed at a position where at least one injection hole post structure is in contact with said end-sealing material.

6-15. (Cancelled)

16. (Previously Presented) The liquid crystal display according to Claim 1, wherein adjacent injection hole post structures are separated by a width that is at least double a predetermined expansion distance of a pollutant from the end-sealing material, wherein a distance to the display area is greater than double the width.

17. (Previously Presented) The liquid crystal display according to Claim 1, wherein said first substrate is a color filter substrate and said second substrate is an array substrate.

18-24. (Cancelled)

25. (New) A liquid crystal display having a first substrate and a second substrate which are disposed with a predetermined gap therebetween, in which liquid crystal is sealed in said gap, comprising:

post structures for controlling the gap between said first substrate and said second substrate;

a sealing material provided outside a display area for sealing said liquid crystal in said gap, and forming an open injection hole for injecting said liquid crystal therethrough;

an end-sealing material for sealing said injection hole after said liquid crystal is sealed in; and

injection hole post structures provided in an area near said injection hole and outside of the display area formed of the same material as said post structures, wherein said injection hole post structures are arranged in a plurality of rows and a plurality of columns.
